

## Jellyfish For Financial Services

### The Challenge

In a borderless cyber world, managing the risk of exposure across organisations is crucial. Every day cyber-attacks grow more sophisticated. Organisations must monitor and control access to their data, networks, and systems.

### Jellyfish: Security by Design

Cogito Group's Jellyfish is a complete and integrated cyber security command and control platform, designed to reduce risk and improve auditing and compliance. It does this by managing users, credentials, devices, and access all in one integrated solution.

This innovative technology enhances security of organisation systems through better visibility and control. To balance security, usability, and cost effectiveness, Cogito Group has developed a customisable modular approach. This allows components to be added or removed dependent on an organisations' individual requirements.

Jellyfish provides a streamlined system of identity and access services that is adaptive to changes in organisation requirements and personnel flow. The integration of these services reduces the exposure to various risks related to access, responsive provisioning and de-provisioning, system monitoring, and integration of physical and logical measures whilst ensuring enterprise efficiency gains are achieved.

Jellyfish incorporates these features to provide:

- Advanced protection of data.
- Sophisticated monitoring services.
- Mature auditing services.
- Comprehensive reporting and analytics functionality.
- Integration with internal directories and databases.
- Integration with legacy systems.

Jellyfish enhances your security through increased visibility, greater control, stronger protection, and seamless authentication. Jellyfish is a simple, cost-effective, low-risk, complete solution for connecting identities such as users, devices, and services to each other.

### New Technology

The innovative technology in Jellyfish includes:

- New devices and software.
- Developing encryption and security protocols.
- Enhanced support for new threat protection.
- Advances in cloud security protection.
- Enhanced authentication and identity solution.

### Jellyfish: Connects all pieces of the Security Puzzle

Jellyfish is purpose-built for agility. The modular design means additional layers and can be inserted, and existing modules can be replaced with new and better technology.

### About Cogito Group

Cogito Group is an award-winning, Australian owned and operated ICT company, specialising in authentication, cloud security, identity management and data protection. Cogito Group protect the authentication methods used to access information through the use of Identity and other security technologies. Cogito Group protect data not only from unauthorised access and disclosure, but also from being altered by an unauthorised third party or a trusted insider with malicious intent. This assists in the detection and prevention of fraud or other malicious activities by third parties or trusted insiders.
